

SOP #17 – Troubleshooting Techniques for Plumbing Systems

Applies to: Domestic cold/hot water, sanitary drainage, greywater, sump ejectors, water heaters, and backflow systems.

1. Common Issues & Diagnostics

Symptom	Likely Cause	Recommended Action
Low water pressure	Blocked aerators, pressure regulator	Clean/replace aerators, check PRV
Discolored or smelly water	Corroded pipe, sediment, biofilm	Flush system, test water, inspect heater
Leaking fixtures or joints	Worn washers, cracked fittings	Tighten or replace fittings
Water hammer or banging pipes	No air chambers, loose pipe hangers	Add arrestors, secure pipes
Slow drainage	Partial blockage, venting issue	Snake line, inspect vent stacks
