

Each System Common Use

- Common Industrial Uses: Steam
- Food Processing & Sterilization
 - Kettles, cookers, CIP systems, autoclaves
 - Pharmaceutical & Clean Rooms
 - Humidification, sterilization, lab equipment
 - Textiles & Printing
 - Dye setting, drying presses, roll heat
 - Power Generation
 - Turbine drivers, pressure reducing stations
 - Pulp & Paper Mills
 - Digesters, paper dryers, press sections
 - Hospitals & Labs
 - Sterilizers, domestic hot water loops, laundry

- Common Industrial Uses: Hydronic (High Temp Water)
- District Heating & Campus Systems
 - Universities, hospitals, military bases
 - Process Heating in Manufacturing
 - Plastics, chemical blending, metal finishing
 - Large Commercial HVAC Systems
 - Hydronic coils, air handlers, radiant panels
 - Warehouses & Distribution Centers
 - Radiant floor heating, perimeter baseboards
 - Food Storage Facilities
 - Climate-controlled rooms, glycol loops
 - Pharmaceutical & Clean Environments
 - Controlled heat transfer for jacketed vessels

Condition	Preferred System
High heat + rapid transfer needed	Steam
Safety-critical or occupied spaces	Hydronic
Simpler maintenance and pump logic	Hydronic
Centralized high-pressure energy plant	Steam
Closed-loop, zone-controlled system	Hydronic
Regulatory or sterilization standards	Steam
