

SECTION 7: FLAME SAFEGUARD CONTROL SOP

Purpose: Ensure safe and reliable burner ignition, monitoring, and shutdown through flame detection and interlock control sequences.

Procedures:

Test flame scanner and verify clean lens and alignment.
Verify purge cycle duration meets code before ignition.
Observe ignition sequence—check for pilot flame establishment.
Monitor main flame detection and response time.
Simulate flame failure to verify lockout response.
Record cycle data, alarm triggers, and resets.

Notes:

Never bypass or override flame safeguard controls.
Inspect UV sensors, flame rods, or IR detectors weekly.
